### Metacarpal Pain Manual Guide - aplikasiblackberry.co

A metacarpal fracture is a type of hand fracture occurring in the bones which form the palm of the hand. These bones, located between the bones of the wrist and the bones of the fingers, are called the metacarpals. There are five metacarpal bones, each articulating with a digit of the hand. They are described by Roman numerals.

### Metacarpal Fractures - Hand and Wrist Institute

Typical symptoms of a metacarpal fracture include pain and swelling of the hand. While bruising may not be seen immediately, there is usually bruising that develops within a few days of the injury. Patients typically notice stiffness of the fingers and pain when trying to form a fist. Symptoms will gradually improve as healing takes place.

### What You Need to Know About Metacarpal Fracture

Wrap your tendon with an elastic bandage. This will apply the necessary compression that your tendon needs to heal. You will want to wear this bandage as often as possible.
