Programming

and a computer programming method.

The method was developed by Richard Bellman in the 1950s

and has found applications in numerous fields, from aerospace engineering to economics.. In both contexts it refers to simplifying a complicated problem by breaking it down into simpler sub-problems in a recursive manner.

Dynamic programming is breaking down a problem into smaller sub-problems, solving each sub-problem and storing the solutions to each of these sub-problems in an array (or similar data structure) so each sub-problem is only calculated once. It is

Dynamic Programming
Dynamic Programming
is mainly an
optimization over plain
recursion. Wherever
we see a recursive
solution that has
repeated calls for same
inputs, we can optimize
it using Dynamic
Programming. The idea
is to simply store the
results of subproblems,
