WORKED EXAMPLE No. 1 Write down the basic dimensions of pressure p. SOLUTION Pressure is defined as p = Force/Area The S.I. unit of pressure is the Pascal which is the name for 1N/m2. Since force is MLT-2 and area is L2 then the basic dimensions of pressure are ML-1T-2 When solving problems it is useful to use a notation to indicate the MLT dimensions

Unsteady local Time derivative Convective Effects Example – convection of heat or a contaminant.... Control Volumes. A system is a collection of matter of fixed identity (always the same packets) A Control Volume (CV) is a volume in space through which fluid can flow (it can be Lagrangian, i.e. moving and deforming with flow or Eulerian, i.e. fixed in space)

Chapter 4 Fluid Kinematics

s. = 2.06 109(N/m2) and ρ = 1000 (kg/m3) The difference is = 0.5% It can be noted that the speed of sound in gases changes more than in liquids with changes in temperature. Worked Example 4.2 An aircraft flies at an altitude of 10,000 m where the pressure and density are 0.265 bar and 0.41 kg/m3. respectively.

Most dramatic examples of fluid mechanics in action are hydroelectric dams. They are huge in size and equally impressive in power they can generate using completely renewable resource; water. The steel and concrete structure of hydroelectric dam holds back millions of tons of water from the river or other body.

Numerical Example A reservoir tank is 100m uphill from a water source, the difference in height between the two is 20m. It is proposed to use a pump to push the water up to the reservoir tank at a flow rate of 0.5LPS. Two pipe diameters of ½” and 1” are available to link the two.

The subject of this work is numerical shape optimization in fluid mechanics, based on isogeometric analysis. The generic goal is to design the shape of a 2-dimensional flow domain to minimize some prescribed objective while satisfying given geometric constraints. As part of the design problem, the steady-state, incompressible Navier-Stokes equations, governing a laminar flow in the domain ...
